

## WELCOME

The entire Nardi collection is the protagonist of these pages. These appliances are the result of the great deal of effort we put into our work and nearly fifty years experience in design and construction. Every day our efforts are focused on the design, the reliability and the efficiency of our products. Every day our clients rely on our products for their quality and safety and the assistance we provide. Search for “your” appliance, the one that best represents your own home lifestyle. You will surely find it in our collection, ranging from modern to traditional, from high-tech to sober. The Kitchen Combination range places emphasis on coordinated colours with granite effect or solid colours.

# REFRIGERATORS

Nardi built-in refrigerators are designed to meet all requirements in terms of performance and size. Double door fridge-freezers, combined in-column fridge-freezers, in-column freezers, refrigerators and freezers all use new generation high-performance compressors that only use gas certified by the most severe international norms. Perfect insulation ensures low energy consumption and optimal preservation of food.

## Energy label

This label is an aid for everyone. It indicates the energy efficiency of all appliances in accordance with specific European standards aiming to reduce energy consumption.

## Class A

Appliances graded in Class A guarantee low energy consumption.

## Class A+

Class A+ is the benchmark for energy savings. Class A+ refrigerators use 25% less energy with respect to those in Class A.

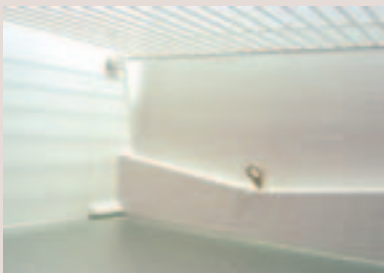

## Insulation

The efficiency of insulation in Nardi fridge-freezers is demonstrated by their greater blackout autonomy.

## Interiors

Refrigerator interiors are extremely well organised. There is a specific place for each type of food and the position of shelves can be adjusted.

## Automatic defrosting

The defrosting of the refrigerator compartment is normally automatic, thus avoiding bothersome manual operations.

## Built Under Refrigerators

All built under refrigerators have a cooling fan to improve the cooling of the compressor. This system lengthens the life of the refrigerator.

### External controls

By means of the external control panel it is possible to change temperature, activate the quick freeze function and also check the state of the refrigerator without opening the door.

### Antimicrobial coating

The special silver-ion antimicrobial coating sanitises the interior of the refrigerator and extends food preservation times.

### Glass shelves

The elegant and easy-to-clean glass shelves ensure greater stability and prevent the dripping of any spilt liquids.

### Digital Thermostat

Apart from ensuring excellent temperature control and better performance of the motor, the innovative digital thermostats consent the refrigerators to be installed in cold environments like cellars, basement recreation rooms and second homes without central heating. The thermostat has an electronic motor protection.

**D I G I T A L**

### Cleaning

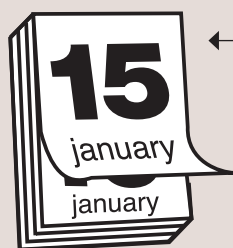

As the internal walls have no grooves for the shelves they are completely smooth and therefore easy to clean.

### No-Frost constant efficiency without effort

The No-Frost system prevents the formation of ice and frost inside the refrigerator and the freezer. Therefore manual defrosting is no longer necessary.

As there is no ice formation inside the freezer, packets of frozen food remain perfectly dry and don't stick together.

The No-Frost system ensures constant internal temperature and rapid return to the ideal temperature even if the door has been opened for quite a while. The humidity rate and the average temperature are lower than those of static refrigerators and therefore provide longer preservation times for all foods.

**Holiday**

By preventing the formation of ice, the No-Frost system ensures constant performance over time without any decline in performance in terms of energy consumption.

As no ice forms on the walls of the freezer, this system allows us to switch off the refrigerator for long periods without having to defrost it beforehand.

### LCD Digital Display

The NFR 58 HB S refrigerator is fitted with a LCD Digital Display with a photoelectric cell. According to the room's level of luminosity, this device distinguishes between night and day and automatically sets the best operating conditions to obtain the highest energy savings.

**NFR 58 HB S**

**Manual twist ice maker**

**Bottle holders**

**Drawers**

Even the drawers have been coated with the silver-ion antimicrobial treatment whose natural bactericidal properties increase the storage life of foods.
